

India Investment Grid (IIG) is an interactive and dynamic national web portal showcasing information on investible projects across India.

With the help of IIG, investors can view, follow and register interest in projects across states, sectors and government schemes in India. Additionally, project owners get a platform to showcase their projects as viable investment opportunities to investors.

IIG seeks to facilitate collaboration by enabling investors to search investible projects pan-India, connect with respective promoters and track project status. Further, it provides tools and dashboards to all users to gain an understanding of investible projects on the portal. IIG aims to match the needs of investors with those of the promoters by creating an interface that provides the requisite information for taking that first step towards making an investment.

IIG an initiative of Department of Industrial Policy & Promotion (DIPP) Ministry of Commerce Government of India and Invest India, the National Investment Promotion and Facilitation Agency.
